## GASTROINTESTINAL STUDY

A new study starting at the Gastrointestinal Laboratory, College of Veterinary Medicine, at Texas A&M University. The Lab has been working for more than 20 years on developing new tests for the diagnosis of gastrointestinal diseases in dogs and cats, and has helped thousands of veterinarians world-wide in the diagnosis of gastrointestinal diseases in small animal patients.

As you probably know, Miniature Schnauzers often have problems with pancreatitis and/or hyperlipidemia. These disorders are probably quite common even in dogs that appear to be healthy. However, little is known about the prevalence, etiology, and therapy of these diseases in this breed. We have decided to initiate a study and investigate the prevalence of hyperlipidemia and pancreatitis in Miniature Schnauzers that appear healthy. This will help us understand the scope of the problem and look for possible etiologies, preventive measures, and more effective therapies.

In order to begin this study we need to collect blood samples from as many Miniature Schnauzers as possible. We only need one blood sample from each dog accompanied by a brief questionnaire, and no follow up is necessary. For each dog, serum triglycerides (a form of lipid) and cPLI (a test specific for pancreatitis) concentrations will be measured, and we will inform you of the results. The cost of these tests is about \$50 per dog, but because we appreciate your help with this study, they will be performed for free. This way, you can have all your Miniature Schnauzers checked for hyperlipidemia and pancreatitis at no cost to you! We will also cover all shipping expenses. Any information used in this study will remain strictly confidential.

If you are interested and can help us find out more about hyperlipidemia and pancreatitis in this beautiful breed, please let us know.

Thank you very much

Sincerely,

Panagiotis G. Xenoulis, DVM, Research Assistant

## Canine Vaccination Protocols

Richard B. Ford, DVM, MS, Dipl. ACVIM, Professor of Medicine, North Carolina State University  
Richard Ford@ncsu.edu Invited by Melanie S. Steele, Greyhound Club of America

THIS ARTICLE HAS BEEN APPROVED BY THE AKC'S CANINE HEALTH COMMITTEE, AND ITS DISTRIBUTION IS ENCOURAGED

The rapid proliferation of companion animal vaccines, advances in diagnostic and vaccine technology, and concerns over vaccine safety are clearly among the most important issues practicing veterinarians face as we enter the 21st Century. While many would argue that these are already issues, the future promises to be especially challenging as the vaccines we currently use and the protocols we recommend undergo unprecedented review.

The following presentation describes changes in canine vaccination guidelines that are the result of changes in the availability and type of vaccines on the market today. For example, the last 10 years alone has seen a rapid proliferation of companion animal vaccines introduced throughout the world. In North America today, there are approximately 25 types of canine vaccine veterinarians must select from. In order to provide the most rational and effective vaccines for the individual patient, revised recommendations for canine vaccination must be anticipated. The material presented in this article serves as a guide for clinicians willing to consider proposed canine vaccination recommendations as they apply to individual patients.

### Why change?

Is it really necessary to revise vaccination recommendations for dogs? Many would challenge that it is not. After all, vaccination practice over the last 20 years has, in fact, worked well. ...canine distemper, canine parvovirus, and canine rabies are virtually non-existent among vaccinated dogs. Yet, despite the obvious successes attributable to companion animal vaccination, veterinarians must be willing to at least review, if not revise, vaccination practice standards as new vaccines are introduced and new vaccine technologies are developed. The objective, quite simply, is to administer the most appropriate vaccine(s) at the most appropriate stage of life and to do so with the best product( s) available. What should not

occur is complacency with respect to selection and administration of vaccine.

The demand among veterinarians that vaccines be safe, simple to administer, and time-saving has led to the long-term and widespread use of polyvalent vaccines. Twenty-five years ago, the most commonly used vaccines contained 3 viral antigens (distemper, parvovirus, leptospirosis).

Today, vaccines containing 7 or more antigens per dose are routinely administered to dogs. Furthermore, polyvalent vaccines are routinely administered annually with seemingly little regard for the actual risk of infection. This is a disturbing trend.

Annual administration of polyvalent vaccine implies that each vaccine antigen, whether of bacterial or viral origin, in each polyvalent product induces the same degree of immunity for the same duration in every patient. Immunologically, this makes no sense whatsoever. Depending on the vaccine antigen, dogs are expected to derive protection that persists for as little as a few months to as long as 7 or more years. Convenience, rather than science, appears to be the driving force behind conventional recommendations listed on vaccine "labels" (product inserts). Depending on the country in which the vaccine is sold, manufacturers may not be required to determine a minimum duration of immunity.

The standard recommendation published on virtually all vaccine labels is that vaccines be administered annually to adult dogs. The veterinary profession for many years has embraced this recommendation. Interestingly, however, for the majority of vaccines administered to dogs today, there are no scientific studies at all establishing a 12-month duration of immunity (001). Vaccine efficacy studies for most vaccines in use today challenged vaccinates just 3 to 4 weeks following the last inoculation. The paradigm that adult dogs and cats require annual boosters for all the commonly administered vaccines is being challenged. We simply cannot continue to arbi-

## Canine Epilepsy Research Breakthrough

UPDATED MARCH 2006:

Dr. Yuri F. Melekhovets, Laboratory Director of HealthGene Corp., Toronto, Canada, has announced that his group has located the gene responsible for producing inherited epilepsy in canines. HealthGene Corporation is the largest private veterinary DNA diagnostic and research laboratory in Canada. DNA-based testing for animal infectious and genetic diseases.

HealthGene now is studying the various mutations that produce different forms of epilepsy in different breeds. Dr. Melekhovets requests that owners of dogs with epilepsy submit blood samples to further that research. Samples should come from dogs which have been medically diagnosed with epilepsy or have had symptoms of epilepsy for at least two years. Two vials of blood samples per dog should be sent in lavender topped tubes, together with a pedigree and brief health history (whether it has seizures, when they started, whether they are mild or severe, and what type of diagnostics have been performed).

Send the samples by FedEx, using HealthGene's account number (#238368138), using FedEx's International Air Waybill with the following information for "Shipment Information":

- Commodity description: "Canine Blood Samples for DNA Testing";
- Total Declared Value for Customs is \$1.00;
- international first; and
- 3 copies commercial invoice.

Send the vials to this address:

HealthGene Laboratory  
2175 Keele Street,  
Toronto, Ontario M6M 3Z4  
Canada.

Dr. Melekhovets may be contacted at:  
telephone: 905-669-5399; fax: 905-669-2235;  
email: dr.melekhovets@healthgene.com

## Black Ribbons

**Can. Ch. Annfield Very Truly Yours**

Ch. Redrose Gimme Moore x Ch. Annfield  
Very Vogue

February 1, 1995 - May 29, 2006

"Truly" was one of the foundation bitches at Dreamaker. She never reached her potential as a great winning show dog or produced many puppies but she was "Truly" very special. From the moment we got her we realized she was different from every other schnauzer. She believed she was human and acted accordingly. When she retired she went to live and be loved and spoiled by Ron and Ellie Newell who let her sleep on the sofa - crates are for dogs. Sadly cancer took her over the Rainbow Bridge the same day her granddaughter Reve became an Am. Champion. Truly's legacy will live on in her grandpuppies and great grandpuppies.

Forever in our hearts. We miss you Truly.

Ken & Elaine Allen

~~~~~

**Intl,Mex,Can,AKC Ch Dynasty's  
Society Page**

crossed the Rainbow Bridge today.

She was 13 years old.

She will be missed by Millie Shultz

## TICK....TICK....TICK!

When you find a blood-sucking tick with its head buried in your dog's skin, you must remove it with care. If you prod it with a hot needle, it might vomit and inject Borrelia-filled stomach contents under your dog's skin. You shouldn't twist a tick to pull it off because you may break off its head. Instead, pull it straight off, gently but firmly. You can also use a special tick remover, which is available from your veterinarian.

trarily administer vaccines without regard for the number and type of vaccine antigens in the product and without realistic consideration of the risk of infection facing the individual animal.

#### **Canine Distemper Virus.**

Modified live virus (MLV) vaccines have been most effective in protecting dogs against canine distemper. Inactivated whole viral vaccines are not effective. Vaccination in puppies is usually continued until 16 weeks of age. Dogs older than 12 weeks of age at the time they are presented for initial vaccination should receive at least 2 canine distemper virus (CDV) 2 to 3 weeks apart. The duration of immunity, determined by challenge, to attenuated (modified-live) canine distemper virus is 7 years for vaccines using the Rockborn strain of CDV while that for vaccines using the Onderstepoort strain is 5 years. The latest information on canine distemper relates to the Recombinant Canine Distemper Vaccine (Merial, Ltd.). This product has been shown to prevent infection as well as the conventional modified-live virus (MLV) vaccines...but, the recombinant vaccine will immunize puppies in the presence of maternal antibody...something the MLV vaccine can not do.

#### **Infectious Canine Hepatitis.**

Vaccination for canine adenovirus infection, the cause of infectious canine hepatitis (ICH), is usually done in combination with that for distemper and other diseases, beginning at 6 to 8 weeks of age. Attenuated (MLV) adenovirus-2 vaccines are generally used in the United States because of their ability to produce a superior immune response but inactivated products are marketed in many countries. The half-life of maternal antibody to ICH is similar to that for canine distemper virus: approximately 8.5 days. By the time a puppy reaches 14 to 16 weeks of age, maternal antibody is not usually detectable. Vaccination, therefore is typically combined with canine-distemper virus. The initial vaccines can be administered at 6 to 8 weeks of age and every 3 to 4 weeks until reaching 16 weeks of age. Although booster inoculation is recommended annually in adults, challenge studies have demonstrated the duration of immunity is at least 7 years when attenuated canine adenovirus-2 is used as the vaccine antigen.

#### **Canine Infectious Tracheobronchitis.**

Infectious tracheobronchitis, or kennel cough, is a complex clinical infection caused by a number of respiratory pathogens that can infect dogs alone or in combination. Causative viruses include distemper (CDV), adenovirus (CAV-2), parainfluenza virus (CPIV), herpesvirus (CHV), and reoviruses. *Bordetella bronchiseptica* is a recognized bacterial patho-

gen.

The performance of parenterally administered ITB vaccines is quite different from that of intranasally (topically) administered vaccine. Parenterally administered vaccine for ITB provides duration of immunity of up to 7 months or longer depending on the antigen. It is not known whether parenteral administration of ITB antigens culminates in the development of an effective local (upper respiratory tract) immune response.

Maternal antibody will, however, interfere with parenterally administered vaccine. On the other hand, vaccine labeled for intranasal (topical) administration can be administered as early as 3 weeks of age (depending on the product), appears to induce a local immune response that is not interfered with by maternal antibody, and has a relatively rapid onset (3 to 5 days).

#### **Canine Parvovirus.**

Canine parvovirus-2 (CPV-2) vaccines are available as inactivated or MLV products. MLV products offer better protection against shedding of virulent virus following challenge than inactivated vaccines. For this reason, older dogs that will be housed with younger susceptible animals should be vaccinated with MLV vaccines. In case of an outbreak, MLV vaccines should always be used. MLV CPV-2 products are consistently shed in the feces of vaccinated dogs and will infect contact animals and may cause weak positive reactions of fecal parvovirus ELISA tests. Duration of immunity of MLV CPV-2 vaccines is at least 7 years based on challenge studies; over-vaccination with this product occurs regularly. The duration of immunity subsequent to administration of inactivated (killed) CPV products has been shown to protect puppies from challenge for at least 16 months postvaccination.

#### **Canine Coronavirus.**

Most vaccines licensed for canine coronavirus are inactivated canine coronaviral or feline coronaviral strains. One attenuated (MLV) canine coronaviral product is available in some countries. In the absence of reliable commercial or in-hospital diagnostic assays for canine coronavirus, the prevalence of clinical disease associated with CCV infection in dogs is unknown but is considered to be extremely low, even in high density shelter environments. CCV vaccine is considered to be among the least important vaccines given to dogs today and has been identified by several authors as a vaccine that, quite simply, is not needed. A minimum duration of immunity has not been established for CCV vaccines; during challenge studies, control dogs do not become ill.

#### **Leptospirosis.**

Inactivated Leptospiral vaccines against 4

serovars inactivated serovars (*L.canicola*, *L. ictero-haemorrhagiae*, *L.grippotyphosa*, and *L.pomona*) are available for dogs. However, the absence of global and regional incidence data for canine leptospirosis greatly complicates the decision regarding whether or not vaccination is necessary and which vaccines should be used.

#### **Lyme borreliosis.**

Commercial inactivated (killed) whole cell bacterins and one recombinant subunit outer surface protein A (OspA) exist in the United States. In Europe, the vaccines are whole cell bacterin.

Vaccines have been shown by challenge studies conducted by the manufacturer of the recombinant OspA vaccine to provide a duration of immunity for up to 1 year.

Immunization should be given early in life to high risk dogs living in endemic regions.

#### **Giardiasis**

An inactivated adjuvanted vaccine is available for vaccination of puppies and kittens. The first dose can be given as early as 8 weeks of age. Routine annual revaccination is not indicated with this product except in the unusual situation where recurrent exposure and infection are documented and can not be controlled using conventional hygienic methods. This vaccine does not prevent infection, but has been shown to diminish fecal shedding of the infectious cysts for up to one year.

#### **Jeannette Stark**

Jeannette Stark passed away on Saturday at home with family after a short bout of illness. Jan was diagnosed with several areas of cancer. Jeannette was a charter member of the Gateway Miniature Schnauzer Club in 1968 and was made an honoree member of the club in 1990.

Jan's wishes were to have donations sent to the following groups instead of flowers. Gateway Havanese Club, the AKC Dog Museum, the Gateway Miniature Schnauzer club, The AKC Dog Museum, and the Hospice Austin.

# Bouquets & Biscuits

\* **Am/Can Ch. Carbor Gonna Do Right** (Am/Can Ch Sensation's What Next x Carbor De-tour Ahead) completed the requirements for his Canadian title at the Erie Shores KC shows on June 1, 2006 and for his AKC title at the Conewango KC show on Friday June 16, 2006. "Dudley" was bred by Carla Borrelli and is co-owned with Susan Lyons.

\* **Ch. Carine New York New York** (Ch. Daree's Notice Me x Starbound Gabby's Gift) completed his title at the Shawnee Ok Show on May 27th under Judge Nancy Smith Hafer. He finished from the bred-by-exhibitor class in four weekends with four majors, breeder/owner/handled!

\* **Can.Ch.Minuteman Locomotion** (black) finished his title in June. "Diesel" is bred and owned by Catherine McMillan and Kurt Garmaker. He's the first Can.Ch. For his dam, Am.Can.Ch.Minuteman Repitition Romantica and 13th for his sire, Am.Can.Ch.Benalta Batman.

\* **Southcross Sensible Shoes VCD1, OAJ, RE** (CH Wards Creek Extreme Commitment x Ragtimes Southcross Kick It Up). Cindy the 4th miniature schnauzer to have achieved the Versatile Companion Dog 1 Title with the AKC. The VCD1 title is awarded to dogs who have a Tracking Dog (TD), Companion Dog (CD), Novice Agility (NA) and Novice Agility Jumpers (NAJ) titles. She is loved, trained and shares her home with Sharon Bloss and the other two of the three mini's with the VCD1 titles. Thank you Sonny Lelle for allowing this wonderful little girl to be in my household.

\* **Tejas Cajun Christmas CD, RA, OA, OAJ** completed his Open Agility (standard) and Open Agility Jumpers titles in Tylertown, MS and Shreveport, LA in April, and his Rally Advanced title in Gonzales, LA in May. He is owned, trained, and handled by Natalia Zotov, and co-owned by his breeder, Bolivia Powell.

\* **Am. Can. Ch. Dreamaker Firestorm** (Am/Can Ch. Dreamaker Elite Force x Can.Ch. Dreamaker Oh My Stars) finished the requirements for her AKC title with a 4 point major at the Sunfower KC of Olathe KS on May 20th under Judge Mrs. Carol Esterkin. Ember was handled by her breeder and owner for her first major and points and thanks to Brenda Combs for her grand finish. She is the 3rd Am. Champion for her sire and second for her dam.

\* **Am/Can. Ch. Dreamaker Divine Revelations** (Am/Can. Ch. Dreamaker Million Dollar Baby x Can. Dreamaker So Truly Divine) Reve finished the requirements for her AKC title at the Couer d'Alene Dog Fanciers show in Couer d'Alene Idaho on May 29th by going Best of Breed under judge Dr. Lee Anthony Reasin. Reve was breeder owner handled all the way by Ken Allen. She finished with 3 majors, her first 4 point major attained at her first show. She is the first Am Ch. for her sire and the fourth for her dam.

\* **Ch. ReCe's A Boyes Idea** finished the requirements for his AKC championship at the Northern California Terrier Association Day 1, April 13th, 2006. A Northern California Miniature Schnauzer club supported entry. He is the first Ch. for his sire, Ch. ReCe's Chip Off The Old Bark and second for his dam, Ch. Pickwicks Happy Two. "Boyes" started his show carrer April 13th 2005 going RWD at the Northern California Miniature Schnauzer Club Specialty his first time in the ring. He finished on April 13th exactly 1 year later. Boyes was completely breeder owner handled to his Championship. He has now retired to our couch for the time being.

\* **Carbor Talk of the Town, AX, OAJ, NAC, NJC, NGC** (Can CH Carbor On the Road Again x Can CH Boxdema Memory of Carbor) earned his Novice Regular Title at the NADAC trial at Macedon NY on June 3. Spenser was bred by Carla Borrelli and is owned and handled by Judy Russell.

\* **Ch. Pendragon Hyspirit Batman Returns** completed his championship on June 16, 2006 completely out of the bred-by class at just a little over 10 months of age. Keaton is the 4th champion for his sire Ch Benaltas Batman and the 1st champion for his dam Ch. Pendragons Give No Warning. He is co-owned by Rebecca Manspeaker and BJ Arczynski.

\* **Loneacre's Firecracker, RN, AX, AXJ**, (CH Dimensions Hot Pursuit UD x CH Loneacre's Charmed I'm Sure) bred by Beth Santure recently earned two advanced agility titles. Connor earned his Agility Excellent Jumpers title on April 22, 2006, and his Agility Excellent title on May 14, 2006. Connor is owned, trained, loved and spoiled (yes, he does bark!) by Lynn Baitinger of Rochester, Michigan.

\* **Ch. Royalcourt You Don't Know Jack** finished the requirements for his AKC title with a 3 point major on May 14, 2006 at the Lancaster Kennel Club Show in Lancaster, PA. Jackson is the first champion for both his sire, Ch. Royalcourt Under Wraps and his dam, Ch. Royalcourt Sugar Glider. He was bred by Gloria Lewis and is co-owned by Gloria Lewis and Anna Mae Balas.

\* **Can.Ch. Minuteman Wild Imagine Nation** (black) finished her title with a group first and third from the classes at the Band City K.C. Bred by Catherine McMillan and co-owned with Kathy Wood, "Lacey" is the fourth Canadian Champion for her sire Ch. Sandcastle's Valiant Robin, and second for her dam, Sandcastle's Cristabelle.

\* **Can Ch Carbor Back Talk, NA, OAJ** (CanCH Carbor On The Road Again x CanCH Boxdema Memory of Carbor) earned her Open Jumpers agility title on April 30, 2006 at the SOTC trial in Marcellus NY. Sassy (also known as Jet Dog) is handled by John Russell, is owned by Judy Russell, was bred by Carla Borrelli and is loved by all three.

\* **Ch Daystar's Boy Named Sue** (Ch Daystar's Storm Chaser X Ch Daystar By Design) completed the title for his championship on March 26 with a 5 pt major. "Cash" is the second champion for his sire and the first for his dam. Cash was shown by his breeder Kim Cox and owner Susan Hersee.

\* **CH MACH Adamis On The Road Again MX, MXJ** (Ch Wards Creek Lasso's The Moon x Ch Adamis Honeydripper) Willie completed the requirements for his Masters Agility Champion (MACH) on March 8, 2006 becoming the 1st male MS to hold both a breed championship and a MACH title. Willie was bred by John Constantine and is owned, trained, handled, and loved by Sue Ratz.

It's a dog's life!

FRONT

BACK

Lori Bush

This beautiful colorful woven 100% cotton afghan of Miniature Schnauzers in a garden setting will be a keepsake. Black, Salt/Pepper and Black/Silver Minis are at home on green grass with colorful shrubs, trees and flowers in the background. Lori Bush and Mildred Shultz collaborated with the artist at We Love Country on this very unique design.
